

Anand Rajesh Uperpelli

(970)213-3994 | ananduperpelli09@gmail.com | LinkedIn | Portfolio | GitHub

Professional Summary

Java Developer with 5+ years of experience in designing, developing, and deploying scalable web applications and microservices. Expertise in Java 11, Spring Boot, Angular, React, RESTful APIs, and cloud platforms including AWS (EC2, Lambda, S3, RDS). Proficient in database management (MySQL, Oracle, Redis), API integration, and performance optimization. Adept at applying Test-Driven Development (TDD), automated CI/CD pipelines, and security best practices including JWT authentication and RBAC. Experienced in Agile/Scrum environments with strong cross-functional collaboration, problem-solving, and leadership skills. Proven track record of enhancing application performance, reliability, and maintainability across enterprise-level systems.

Skills

Programming Languages: Java 11, Python, JavaScript, TypeScript, SQL, PL/SQL, HTML5, CSS3, jQuery, Bootstrap, Ajax

Frameworks & Libraries: Spring Boot, Spring Cloud, Spring Core, Hibernate, JPA, JDBC, JDBI3, Angular 10+, React, MapStruct, GraphQL, Flask, FastAPI, Tailwind CSS, Microservices, Spring AOP, TDD, JUnit, Mockito, Swagger, Pandas, NumPy

Web & API Development: RESTful APIs, API Integration, API Validation, JWT Authentication, RBAC, JMS, DTO-to-Entity Mapping

Databases & Storage: MySQL, MS-SQL, Oracle Database, Redis, AWS RDS, AWS S3

Cloud & DevOps: AWS EC2, Lambda, Fargate, CloudWatch, CloudTrail, Jenkins, CI/CD, Splunk, Tomcat, WildFly, JBoss, Automated Deployment Scripts

Tools & IDEs: VS Code, Eclipse, IntelliJ, STS, Git, Toad, MySQL Workbench, Putty, WinSCP

Workflow & Methodologies: Agile/Scrum, Jira, Confluence, Cross-Functional Team Collaboration

Performance, Security & Testing: Unit, Integration & Functional Testing, API Reliability Testing (Postman), Encryption/Decryption, Data Security Compliance, Production Monitoring & On-Call Support

Professional Experience

Java Developer | Wayfair, USA

Aug 2024 - Present

- Designed, developed, and maintained scalable backend microservices using Java 11, Spring Boot, and RESTful APIs to streamline dynamic inventory allocation and real-time order processing across multiple warehouses.
- Integrated third-party APIs and internal services for syncing product availability and pricing updates, reducing data latency by 30% through Spring Cloud and RabbitMQ.
- Implemented JWT-based authentication and role-based access control (RBAC) for securing backend endpoints, ensuring compliance with data privacy and security standards.
- Leveraged MySQL and Redis for optimized product catalog storage and cache management, improving product detail page load times by 40% during peak seasonal sales events.
- Collaborated in an Agile/Scrum environment with product owners, QA engineers, and frontend developers to deliver a seamless checkout experience and consistent cart functionality across web and mobile platforms.
- Developed comprehensive unit and integration tests using JUnit and Mockito, achieving 90% test coverage and reducing post-production defects by 25%.
- Monitored, troubleshooted, and optimized microservice performance using AWS CloudWatch and CloudTrail, resulting in a 40% reduction in API response times for order placement workflows.

Sr. Associate, Software Development Engineering | Fiserv Pvt Ltd, Pune, India

Feb 2022 - Dec 2023

- Led the end-to-end development of Point of Sale Portal and Point of Sale Admin Portal, ensuring seamless integration, data security, and smooth system operations.
- Migrated the Admin Portal to Spring Boot and Angular 10+, implementing advanced encryption/decryption features to strengthen data protection and system efficiency.
- Designed and optimized PL/SQL procedures, database packages, and queries, improving system response times by 40% and ensuring high database performance.
- Applied Test-Driven Development (TDD) practices with JUnit and Mockito, integrated Swagger for API validation, and enhanced production reliability with Splunk monitoring during on-call support.
- Rewrote legacy Pro*C merchant operations code into Java, modernizing message handling by integrating JMS (ActiveMQ) and improving system stability.
- Automated DTO-to-entity mapping in Spring Boot using MapStruct, reducing boilerplate code by 70% and improving maintainability.
- Collaborated cross-functionally with Business Analysts and QA in Agile/Scrum, leveraging Jira for tracking and reporting, which accelerated issue resolution by 20%.

Software Engineer | EPAM Pvt Ltd, Pune, India

Jan 2020 - Jan 2022

- Designed and developed RESTful API endpoints to unify multiple backend services into consolidated API calls, streamlining complex business workflows, reducing redundancy, and improving overall system efficiency.
- Deployed and managed applications on AWS Lambda, creating serverless workflows and executing extensive functional, integration, and performance testing with diverse datasets to ensure business logic accuracy, scalability, and cost-effectiveness.
- Provisioned, configured, and maintained AWS infrastructure (EC2, RDS, S3) to support reliable deployment environments, secure data storage, and high system availability across distributed services.
- Enhanced frontend performance and responsiveness by implementing AJAX-based asynchronous calls, enabling dynamic content updates without page reloads, which improved user experience and reduced page load latency.
- Implemented JWT-based authentication and role-based security controls to secure backend APIs, safeguard sensitive customer data, and ensure compliance with enterprise-grade security standards.
- Built and optimized CI/CD pipelines with Jenkins, automating build, testing, and deployment processes to accelerate release velocity, minimize manual intervention, and improve software delivery reliability.
- Collaborated within an Agile/Scrum environment using Jira for sprint planning, backlog grooming, task estimation, and cross-functional communication, ensuring timely project delivery and improved team accountability.

Education

Masters of Science in Computer Information

Aug 2023 - Dec 2024

Colorado State University, Fort Collins, Colorado, USA

Bachelors of Engineering in Computer Engineering

Jun 2016 - May 2019

Pune University, Pune, Maharashtra, India

Certifications

- Cyberdefense Pro Certification (TestOut)
- Cybersecurity (Colorado State University)
- Information Technology Project Management Certificate (Colorado State University)

Project

Quiz Management System | Jul 2024 - Nov 2024

- Engineered a comprehensive quiz platform utilizing a microservice architecture, managed through an API Gateway for secure and efficient request routing.
- Developed robust back-end microservices with Spring Boot, leveraging JPA for persistent storage of quizzes, questions, and user scores.
- Ensured real-time data flow between services by implementing Feign Client for declarative REST communication, enabling instant automated scoring.
- Delivered an end-to-end solution integrating quiz creation, user attempts, and automated grading into a cohesive platform.

Data Transfer Using LiFi | Jul 2018 - May 2019

- Engineered a hardware device to transmit data using light as the transmission medium, enhancing traditional methods.
- Developed a complementary device for receiving data, ensuring compatibility and efficiency.
- Implemented light-based transmission to improve data efficiency and security compared to radio frequency waves.
- Facilitated simultaneous real-time data reception for optimized communication.
- Designed the system with unidirectional focus for streamlined communication.

CWIT Admission System | Jul 2015 - May 2016

- Developed a website using JSP and Servlets to manage admissions, course allocation, roll number generation, and student records.
- Integrated a feedback feature for students to improve educational offerings.
- Implemented automated marks storage and result generation for enhanced efficiency and accuracy.
- Added functionality to export student data in PDF format for easy documentation and sharing.
